Project	Signs with Smart Connectivity for Better Road Safety

1. INTRODUCTION:

1.1 Project Overview:

- The Objective of this is to replace the static signboards. Instead, smart connected signboards are used.
- These smart connected signboards get the speed limitations from a web app using weather API and update automatically. Based on the weather changes the speed may increase or decrease.
- Based on the traffic and fatal situations the diversion signs are displayed. Guide (for Schools), Warning, and Service (Hospitals, Restaurants) signs are also displayed accordingly.

1.2 Purpose:

The Purpose of this project is to develop a digital signboard system where the normal signs are displayed with their actual names. And also, to create awareness of the road safety to everyone and obey the traffic rules. To create a better view and warn in the night time.

2. Literature Survey:

2.1 :Existing Problem:

- Damage criteria in static signboards:
 - Paint deterioration
 - Folded Sheets
 - Pole Bent
 - Concealment by Vegetation
- Drivers can face confusing road signs at certain circumstances.
- The National Crime Records Bureau (NCRB) 2022 report states that there were 155,622 fatalities, highest since 2014, out of which 69,240 deaths were due to two-wheelers.
- A study by IIT Delhi points out that the national highways constitute only 2% of the length of roads in India, but they account for 30.3% of total road accidents and 36% of deaths.
- Deaths by accidents on roads increased by almost 17 per cent in 2021, indicating an increase in the rate of deaths per 1,000 vehicles.

2.3. Problem Statement Definition:

To replace the static signboards, with smart
connected digital signboards. These smart connected signboards get the speed limitati
ons from weather API

and update automatically.

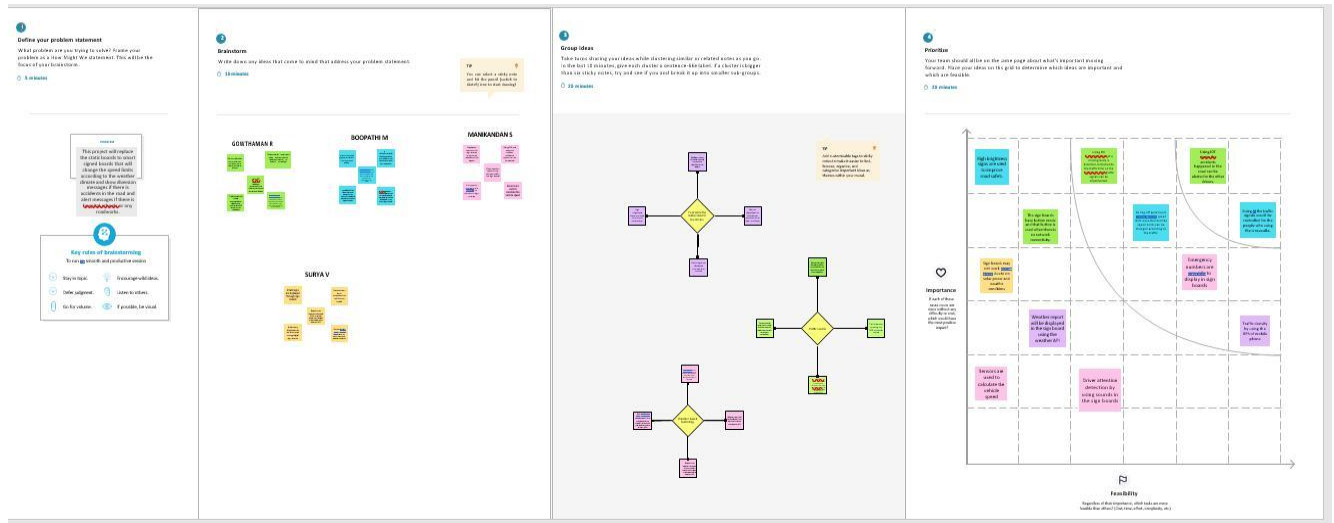

Based on the weather change the speed may increase or decrease. It will display the normal signs in necessary places with wording to be aware of the signs. Based on the traffic and fatal situation the diversion signs are displayed. Guide (Schools), Warning and Service (Hospitals, Restaurant) signs are also displayed accordingly. Change of modes will take place automatically.

3. Ideation and Proposed Solution:

3.1. Empathy Map Canvas:

3.2. Ideation&Brainstorming:

3.3. Proposed Solution:

S.No.	Parameter	Description
1.	ProblemStatement(Problemtoresolved)	InpresentSystemstheroadsignsandthespeed limitsareStatic.Buttheroadsignscanbechangedinsomecases.Wecanconsidersomecases whentherearesomeroaddiversionsduetoheavytrafficordue to accidents then we can change theroadsigns accordingly, if they are digitalized.This project proposes a system which has digital sign boards on which the signs can be changed dynamically.If there is rain fall then the roads will be slippery and the speed limit would be decreased. There is a web app through which you can enter the data of the road diversions, accident prone areas and the information sign boards can be entered through web app. This data is retrieved and displayed on the sign boards accordingly.
2.	Idea/Solutiondescription	TheIdeaistoreplacethestaticsignboards.Instead,smartconnectedsignboardsareused.Thes smartconnectedsignboardsgetthespeed limitations from a web app using weather API and update

		<p>automatically. Based on the weather change the speed may increase or decrease. Based on the traffic and fatal situation the diversions signs are displayed. Guide (for Schools), Warning and Service (Hospitals, Restaurant) signs are also displayed accordingly.</p> <p>Additionally, Speed camera integrated with image processing technique is added to detect any traffic speed violations and charge fines.</p>
3.	Novelty/Uniqueness	Usage of speed camera integrated with Image Processing technique for detection of speed violation.
4.	Social Impact/Customer Satisfaction	Diversion Indication System if traffic or constructions ahead. Speed limit Instructions. Guide (for Schools), Warning and Service (Hospitals, Restaurant) signs are displayed.
5.	Business Model (Revenue Model)	Since Image Processing and API are used for monitor, this project employs a decent business strategy and enhances services.
6.	Scalability of the Solution	Low-cost Implementation and Maintenance. Durability of the product is high.

3.4. ProblemSolutionFit:

Signs with Smart Connectivity for Better Road Safety

<p>1. CUSTOMER SEGMENT(S) Who is your customer?</p> <ul style="list-style-type: none"> Highway division passenger <p style="text-align: right;">CS</p>	<p>6. CUSTOMER CONSTRAINTS What constraints prevent your customers from taking action or limit their choices of solutions?</p> <p>The impact of the network on the tests was a significant and unexpected element. Given the quantity of sensors, this IoT-based system was successful in simulating a large-scale smart sign board.</p> <p style="text-align: right;">CC</p>	<p>5. AVAILABLE SOLUTIONS Which solutions are available to the customers when they face the problem?</p> <p>Along roadways, static signs with clear directions are put as potential fixes.</p> <p style="text-align: right;">AS</p>
<p>2. JOBS-TO-BE-DONE / PROBLEMS Which jobs to be done (or problems) do you address for your customers?</p> <p>Among its many duties, the Smartboard Connectivity is in charge of keeping correct temperature sensor readings and informing the board of the speed of the customer's vehicle.</p> <p style="text-align: right;">J&P</p>	<p>9. PROBLEM ROOT CAUSE What is the real reason that this problem exists? What is the back story behind the need to do this job?</p> <p>No Sensor readings from the weather would alter the speed restriction if there was no internet connection. Unnecessary pressing of the accident indicator button by some people could lead to problems.</p> <p style="text-align: right;">RC</p>	<p>7. BEHAVIOUR What does your customer do to address the problem and get the job done?</p> <p>As a teacher, the IoT cloud updates the smartboard on the condition of the roads on a regular basis.</p> <p style="text-align: right;">BE</p>
<p>3. TRIGGERS What triggers customers to act?</p> <p>Poor weather conditions prevail. The vehicle should be moving at threshold speed. The sensor value should be shown on the smart board to alert the customer.</p> <p style="text-align: right;">TR</p>	<p>10. YOUR SOLUTION</p> <p>We employ smart linked sign boards as an alternative to static signboards. With the help of a web app and weather API, these intelligent connected sign boards automatically</p> <p style="text-align: right;">SL</p>	<p>8. CHANNELS of BEHAVIOUR</p> <p>8.1 ONLINE What kind of actions do customers take online? The departments can receive direct emails or messages from customers. (Officers on nearby patrol).</p> <p>8.2 OFFLINE</p> <p style="text-align: right;">CH</p>

4. Requirements:

4.1. FunctionalRequirement:

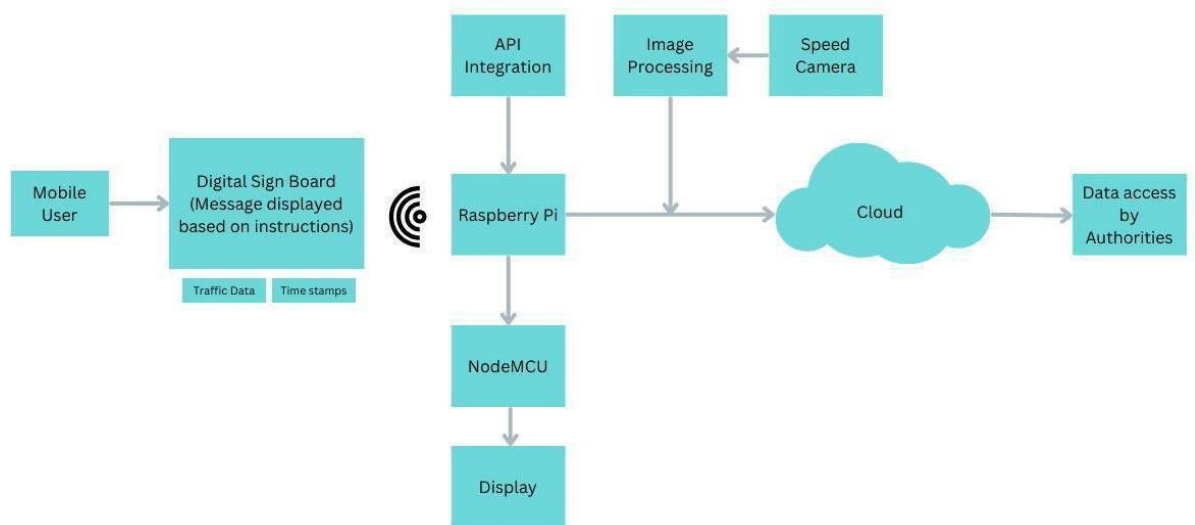

FR No.	FunctionalRequirement(Epic)	SubRequirement(Story/Sub-Task)
FR-1	UserVisibility	SignBoardwillhaveand clearandinteractiveUIsothatitwillbeclearlyvisibletoaol
FR-2	UserUnderstanding	Thesignsthataretobedisplayedinthesignboardwillbewit hitsrespectivenames,sothattheuserscanclearlyundersta ndeverything
FR-3	UserConvenience	Signswillbedisplayedflawlesslysuchthatit willbeofbetterconvenience.

4.2. Non-Functional Requirement:

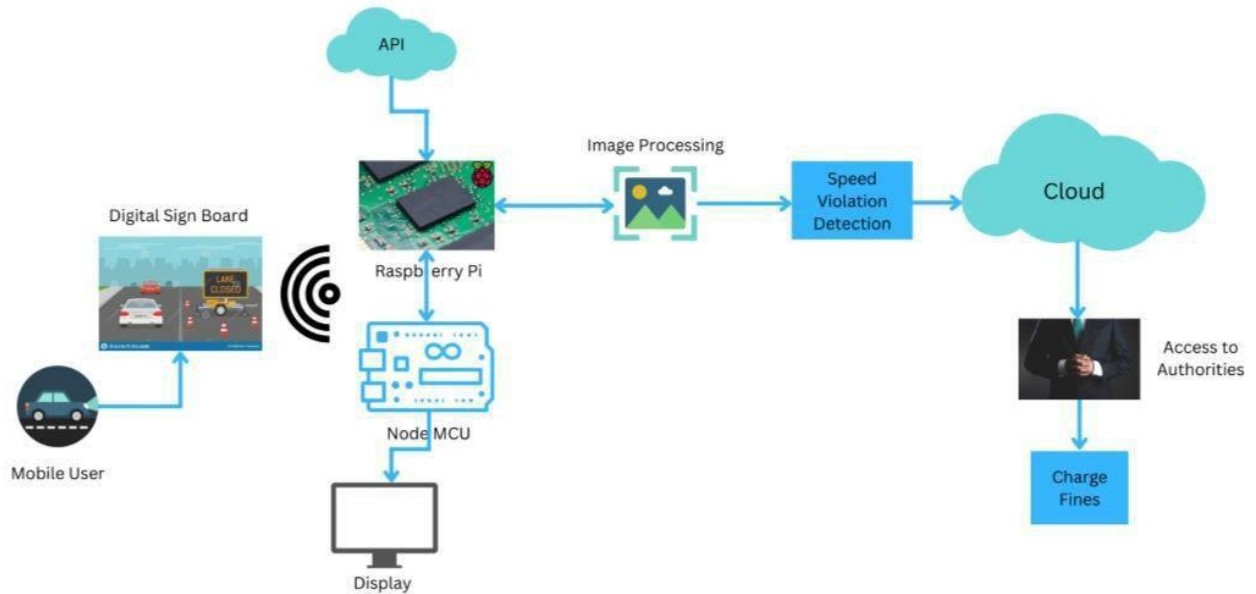

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Formultiple sign display, timestamps will be allocated for each sign. It will automatic and dynamically changeable. No need for manual operations.
NFR-2	Security	Only required can will be showed. No chance of security vulnerability.
NFR-3	Reliability	More reliable than the existing system
NFR-4	Performance	Acceptable performance with dynamic updating of data regarding weather, traffic, etc.
NFR-5	Availability	It will be available for working every 24/7.
NFR-6	Scalability	Implementation and Maintenance cost will be less, so that the product is highly scalable.

Date:	17-Nov-22								
Team ID	PMIT2022-TMDIR259								
Project Name	Project - Signs with Smart Conne								
Maximum Marks	4 marks								
Pre-Requsite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Comments	TC for Automation(Y/N)	BUG ID	Executed By
Node Red Installation	1.Select IEM IoT input in Node. In IEM IoT Watson Platform, go to apps and click on generate API key. 2.Copy & paste generated API key and token in the IEM IoT input. After entering all details, click the done button. 3.Add debug to the IEM IoT and rename as Msg payload and click on done. Click chart from the dashboard and fill the details & add functions to the chart. Check the generated values from the debug message. 4.Edit function node, connect them, add another chart and functions, name them as "Temperature" & "Location" 5.Finally add light ON/OFF buttons to the IEM IoT and debug. Verify the output from IoTDC REST api using Postman tool.	Values of sensors and button for light ON/OFF is displayed	Values of sensors and button for light ON/OFF should be displayed	Working as expected	Pass	Results verified	No		R.Gowthaman,M.Boopathi,S.Manikandan,V.Surga
Python 3.7.0(64 bit) installation	1.Download and install Python 3.7.0 2.Develop python code	https://www.python.org/old-versions/3.7/	User should be able to develop a python code	Working as expected	Pass	Results verified	No		R.Gowthaman,M.Boopathi,S.Manikandan,V.Surga
Python 3.7.0(64 bit) installation	1.Download Python 3.7.0 2.After python code	Get the output from the code	User should be able to get the results from the developed code	Working as expected	Pass	Results verified	No		R.Gowthaman,M.Boopathi,S.Manikandan,V.Surga

8.2. User Acceptance Testing:

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the [Product Name] project at the time of the release to User Acceptance Testing (UAT).

2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity1	Severity2	Severity3	Severity4	Subtotal
By Design	10	4	2	3	20
Duplicate	0	2	2	0	4
External	2	3	0	1	6
Fixed	11	2	4	17	34
Not Reproduced	0	0	1	0	1
Skipped	0	0	0	1	1
Won't Fix	0	1	0	3	4
Totals	23	12	9	25	70

3. Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	20	0	0	20
Client Application	38	0	0	38
Security	3	0	0	3

OutsourceShipping	3	0	0	3
ExceptionReporting	5	0	0	5
FinalReportOutput	10	0	0	10
VersionControl	3	0	0	3

10. Advantages&Disadvantages:

The main advantage of this project is that it is a dynamic system which can change different modes of operations automatically.

It gathers weather data from open weather API and displays speed according based on the climate.

Displays service warnings like schools, hospitals and holy places and warn to slow down and be silent.

Traffic data and Construction warning data are given with random inputs. Based on traffic and construction data, warnings are displayed.

Additionally, a speed cam will be integrated with the digital sign board which uses Image processing & AI, to get the detail of the driver who breaks the traffic rules (especially speed) will be updated in the cloud database.

Also, for No parking and One way rule violations can also be detected and appropriate action can be taken. Violation of stop signs in intersection will also be detected using AI.

11. Conclusion:

The project concluded by replacing the static sign boards with smart connected digital sign boards. Digital road signs are an important part of modern infrastructure and are becoming increasingly common.

Digital road signs are becoming more common as technology improves and more states adopt them. The use of digital road signs is expected to continue to grow in the future as it would be observed user-friendly, economic, environment friendly, profitable promoting road safety. Digital road signs are designed to improve road safety and efficiency by providing real-time information to drivers. These signs can display a variety of information, including speed limits, traffic conditions, and weather warnings. Digital road signs can help drivers by providing information that is not always available from traditional static signs.

12. FutureScope:

- Inthefuture aspeedcam willbeintegratedwiththedigitalsign board.
- UsingImageprocessing&AI, thedetailsof thedriverwhobreaksthetrafficruleswillbe updatedintheclouddatabase.
- NoparkingandOnewayruleviolationscanalsobe detectedandappropriateactioncanbetaken.
- Violationsofstopsignsinintersectionwill also bedetectedusingAI.
